It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

buring sequence assembly data is compared from overlapping clones.

Where differences are hound these are annotated as variations

together with a note of the overlapping clone name. Note that the variation annotation may het be found in the sequence submission colly a small overlap as deschibed above.

This sequence was finished as Kollows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve All sequencing problems, such one plasmid subclone or more than one Mil's subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature rable with their source databased; Ent. EMBL; Swi, SWISSPROT; Tr., TREMBL; Wpi, WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5520 TCTGTTAGTAGGCCTTGTTCCTGCACCATGAGCATGATTATGAAGTTGTGTTTCCACAC 5461
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AL606804 185467 bp DNA linear PRI 23-OCT-2002 Human DNA sequence from clone RP11-978115 on chromosome 1, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5640 CCCCATCAGAGATCCTCCCTGAGCTCCAATGATGACGATAGAGAACATTGACACCCTC 5581

/Jote="Homology region A with Elk-1 protein (Ets domain)
is bp 150-417, amino acids 1-89; Homology region B with
Elk-1 protein, required for cooperative terinary complex
formation with SRF is 565-617, amino acids 136-157;
Sequence diverges from SAP-1B at bp 1229, amino acid 360;
Homology region C with Elk-1 protein, core of regulated
transcription activation domain, is bp 1203-1355, amino
acids 352-402; 6371P motifs conserved between SAP-1A and
Elk-1 are located at amino acids 7354, 7360, 7366, S381,
S387, 7420, 8425, corresponding to bp 1209-1214, bp
1407-1412, bp-1422-1427"

/tissue type="Peyer's patch"
/clone Tib="UnrawPM3"
/clone Tib="UnrawPM3"
/clone Tib="UnrawPM3"
/clone Tib="UnrawPM3"
/pote="Organ: small intestine, jejunum; Vector:
pcWVSPORT6; Site 1: Not1; Site 2: Sall; Jejunal Peyer's
pcwCsport6; Site 1: Not1; Site 2: Sall; Jejunal Peyer's
pcross-bred pigs. RNA was extracted either immediately or
after 3 hours stimulation in an Ussing chamber with one of
the following treatments: 1) no treatment, 2) Salmonella
choleraeeuis vaccine strain SC-54, 3) phorbol myristate
acetate, concanavalin A, and 8-bromo-cyclic AMP, and 4)
lipopolysaccharide and cholera toxin. Each treatment was
performed in the presence and absence of cycloheximide.
Purified poly A + RNA from each of the treated tissues
(2-4) was combined together, reverse transcribed, and
cloned in to pcWVSPORT6 to make a library of approximately
530,000 recombinant clones with an average insert size of
1.0 kbp. Poly A+ RNA from freshly isolated and non-treated
tissue from an Ussing chamber (treatment 1) was cloned in
the same manner to produce an unstimulated colb. library of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            approximately 900,000 clones with an average insert size of 1.5 kbp. Equal portions of the two libraries were pooled and then subtracted with porcine ST fibroblast RNA to create a subtracted porcine Peyer's patch library of approximately 6,000 clones with an average insert size of 1.0 kbp."

                                                                                                                                                                                                                                                        NOTE: This is a "working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DB 2; Length 141268;

Direct Submission

Submitted (24-ANG-2002) Whitchead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA On Apr 5, 2000 this sequence version replaced gi:6970536.

All repeats were identified using RepeatMasker:
Smit, A.F.A. & Green, P. (1996-1997)
http://fcp.genome.washington.edu/RW/RepeatMasker:html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            * NOTE: This record contains 134 individual
* sequencing reads that have not been assembled into
* contiggs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
the record is updated, the accession number will
be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Center code: WIBR

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
the record is updated, the accession number will
* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Contact: sequence submissions@genome.wi.mit.edu ------ Project Information Center project name: L5247 Center clone name: 482_N_10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      798: contig of 798 bp in length

R. Site: Drall (CACTGTGTG)

[ATGTGGCCTTTTTTTTTTTTTTT], double-stranded cDNA was synthesized using specific 5' and 3' primers and amplified by PCR. The PCR product was digested with Sfil and size selection was performed to exclude fragments <1.5kb.The Sfil and size selection was performed to exclude fragments <1.5kb.The Sfil digested PCR product was cloned into distinct Drall sites of pME182-F13. Khof sites just outside were constructed by oligo-capping method (Sugano et al., Institute of Medical Science, University of Chief. Control of Medical Science, University of Chief.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        248. .. 559

Berkeley CA 94720
This clone was sequenced as part of a high-throughput process to
This clone was sequence has been subjected to integrity checks
Science 2000). The sequence has been subjected to integrity checks
for sequence accuracy, presence of a polyA tail and contiguity
within 100 kb in the genome. Thus we believe the sequence to
reflect accurately this particular cDNA clone. However, there artifacts associated with the generation of cDNA clones that may
have not been detected in our initial analyses such as internal
priming, priming from contaminating genomic DNA, retained introns
due to reverse transcription of unspliced precursor RNAs, and
reverse transcriptase errors that result in single base changes.
Por further information about this sequence, including its location
and relationship to other sequences, please visit our Web site
(http://fruitfly.berkeley.edu) or send email to
cocha@fruitfly.berkeley.edu)
